

Eco tubes

We have two types of Eco Tubes in our offer:

- **monomaterial HDPE** made from high-quality HDPE material and closed by an HDPE flip-top. Together they form a mono-material packaging with up to **45% less plastic** in the tube body! Tubes are suitable for PE recycling streams. HDPE is a material known for excellent elastic properties, suitable for many products like cosmetic and pharmaceutical creams and balms.
- **PCR tube** (Post-Consumer Recycled) made from components which contain consumer recycled plastic. The use of PCR recyclete reduces the amount of new plastics in our environment. No new resource extraction is needed! PCR tubes are easy recyclable.

Meet your sustainability goals with Formika!

We don't want to just produce packaging, we want to make everyday life easier
